National Weather Service - Amarillo

Issued: 5/31/2017 3:47 AM

There will be slight chances or chances for showers and thunderstorms today through Saturday across the Texas and Oklahoma Panhandles. Drier conditions are expected for Sunday. Although a few storms could become strong to marginally severe with small hail, strong winds and very heavy rainfall, widespread severe weather does not appear likely.

Rain Chances Improving

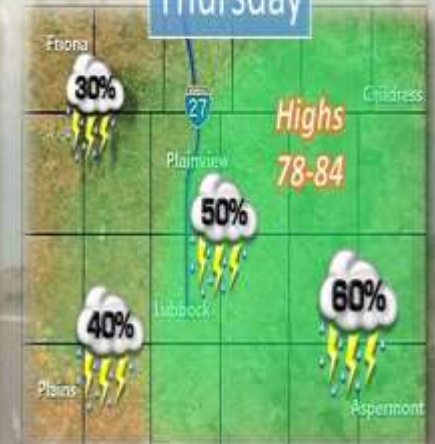

NWS Lubbock

Deeper moisture ahead of a slow-moving upper trough will increase chances for showers and thunderstorms by tonight and Thursday. Rain may be heavy at times, and brief severe storms could develop.

Today

Thursday

Improving moisture from the Gulf ahead of a slow-moving upper trough will boost rain chances in the coming days. Weak winds in the atmosphere will lead to slow storm motions, with heavy rain possible. Highs will be seasonably cool in most areas

Hazardous Weather

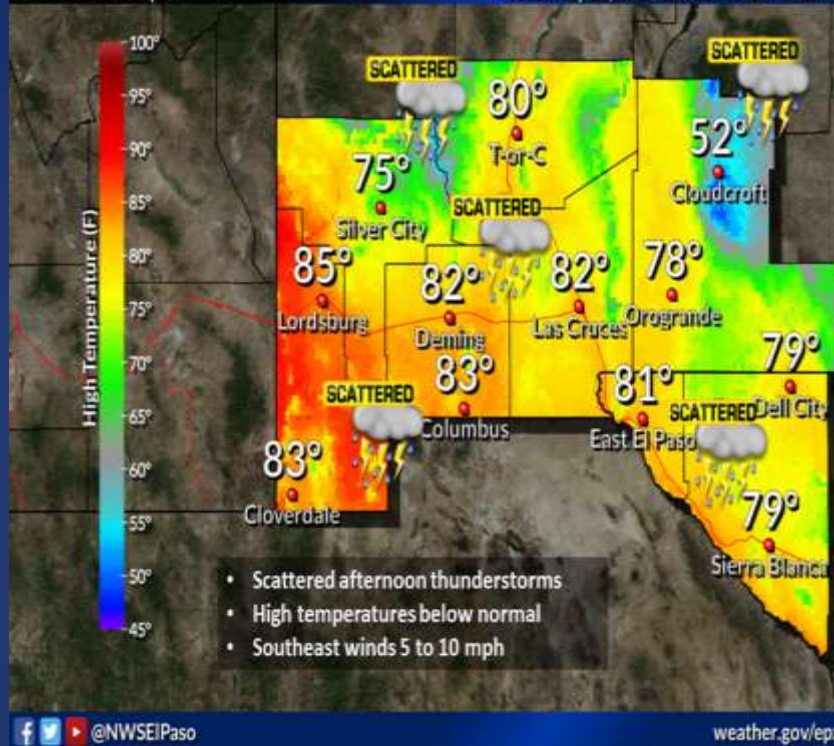

Wednesday's High Temps

Below Normal Temperatures

Weather Forecast Office

El Paso, TX

Issued May 30, 2017 10:40 PM MDT

We will continue to see a chance for thunderstorms on Wednesday. Our high temperatures will be well below normal, under mostly cloudy skies. Winds will be from the southeast at 5 to 10 mph.

Wet Wednesday and Thursday

Best Rain Chances over Next 24 Hours

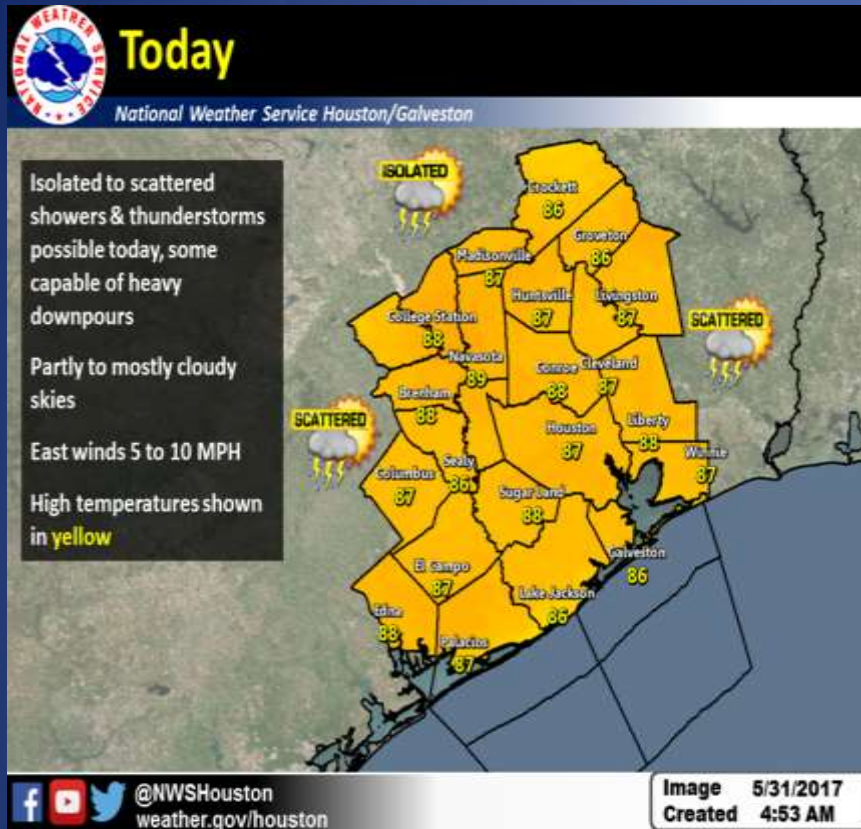

Showers and storms will spread north across West Central Texas through Thursday

Rain totals will average 1/4 to 1/2 inch...but some areas may see heavier amounts of 1-2 inches

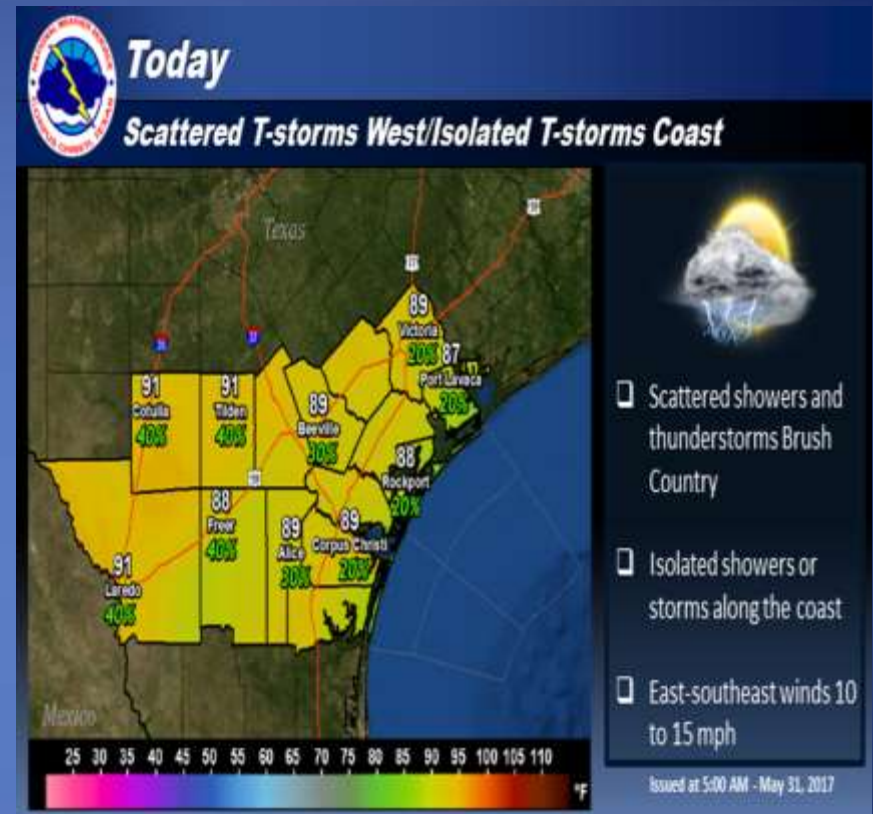

Rain chances will increase across West Central Texas as showers and storms spread northward across the area today, tonight, and Thursday.

Hazardous Weather

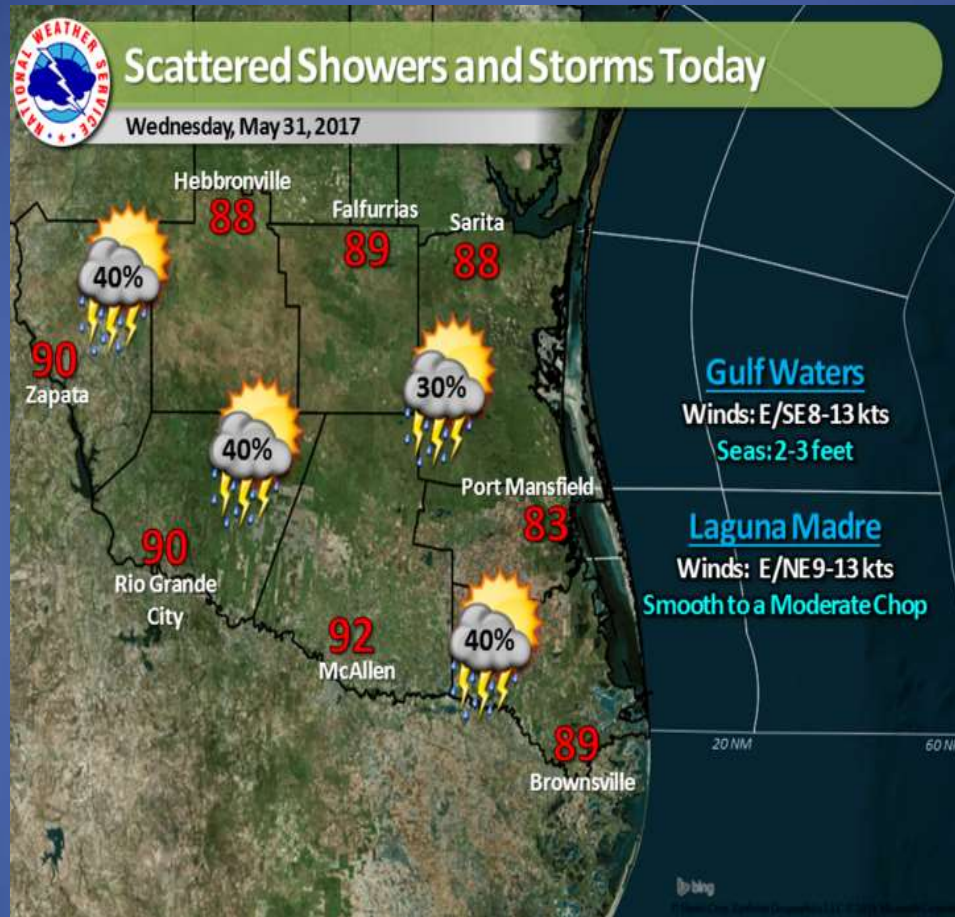

Isolated to scattered showers and thunderstorms are possible today, with some capable of producing locally heavy downpours. Otherwise, expect highs in the mid to upper 80s.

An upper level disturbance moving out of Mexico will interact with moisture over the Brush Country to produce scattered showers and thunderstorms today. The air mass will be a little drier along the coast today. This will limit chances for storm development. Temperatures will be near normal for the coastal plains and slightly below normal for the Brush Country.

Hazardous Weather

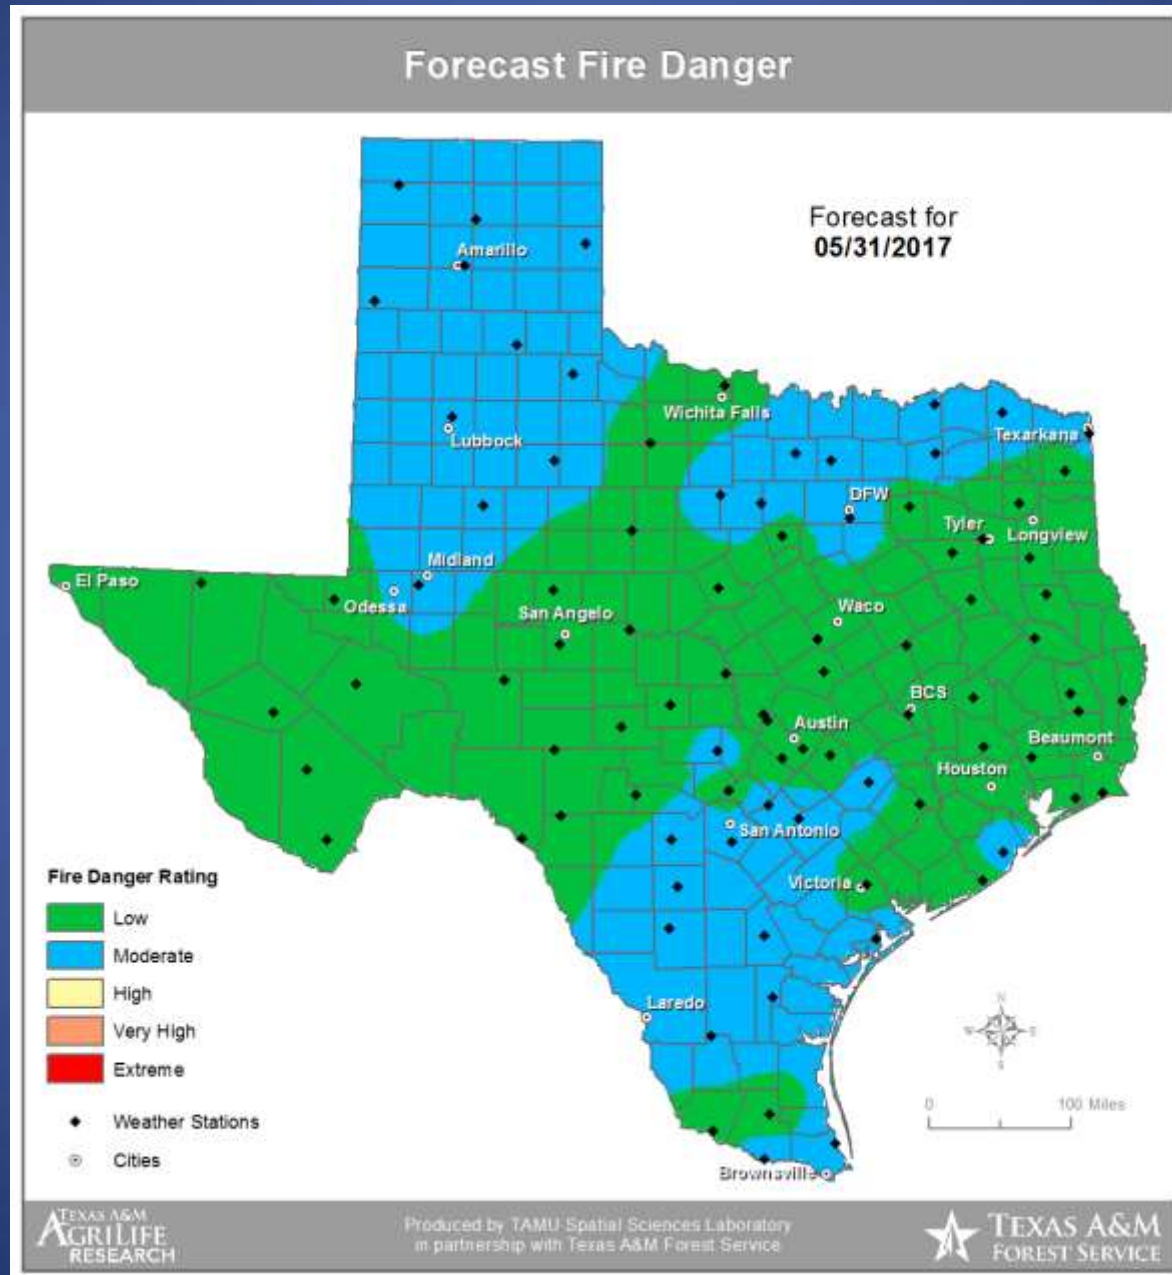

A weak disturbance and increasing moisture will lead to another shot of showers and thunderstorms today with a few heavy downpours possible. Temperatures will be around normal with highs in the upper 80s and low 90s with favorable marine conditions off the Lower Texas Coast.

Weather Warning/Advisories Issued
